SOFTWARE ENGINEER

Software Engineer with hands-on experience contributing to full-stack applications and building independent web projects. Skilled in JavaScript, TypeScript, React, Node.js, GraphQL, PostgreSQL, and Prisma, with experience developing API functionality, implementing database operations, and debugging across application layers.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, SQL, HTML5, CSS3

Frontend: React, Vite, Responsive Web Design **Backend:** Node.js, GraphQL, Pothos, API Development

Databases: PostgreSQL, MongoDB **ORM:** Prisma **Tools:** Git, GitHub, Jira, Docker

PROFESSIONAL EXPERIENCE

Synthesis Workshop — Software Engineering Extern 2026

- Contributed to an existing TypeScript and Node.js full-stack application across React frontend, GraphQL API, Prisma ORM, and PostgreSQL database layers.
- Developed GraphQL queries, mutations, and resolvers supporting learner progress, course structures, node completion, and application workflows within the existing authentication architecture.
- Implemented data persistence with Prisma and PostgreSQL, working with relational models, database relationships, migrations, upserts, transactions, and data integrity.
- Debugged issues across frontend, API, and database layers; used Git, GitHub, and Jira to collaborate on implementation and troubleshooting.

Wolf and Crane Bar, Park Hospitality — Bartender | Little Tokyo, Los Angeles Feb 2022 – Present

- Troubleshoot service and operational issues by identifying contributing factors, testing solutions, and adjusting workflows to prevent recurring problems.
- Analyze changing service demands, prioritize competing tasks, and adapt quickly to maintain accuracy and efficiency in a high-volume environment.
- Coordinate with bartenders and barbacks to resolve operational bottlenecks, communicate clearly under pressure, and maintain smooth team workflows.

TECHNICAL PROJECTS

Whiskey Finder — Independent Web Application

React, TypeScript, JavaScript, Vite, CSS, GitHub Actions

- Built an interactive whiskey recommendation application matching user preferences across flavor profile, price range, and country of origin.
- Implemented a weighted recommendation algorithm scoring flavor (60%), price (25%), and region (15%) to return the top three matches.
- Curated 100 whiskey records with flavor profiles, pricing tiers, and pour-size information in local JSON data files.
- Built reusable React components and deployed the application to GitHub Pages using GitHub Actions.

Additional Projects

Spots | GitHub: Responsive JavaScript image-sharing app with photo uploads, likes, collection management, and asynchronous API requests for data persistence.

To-do App | GitHub: JavaScript task manager using OOP, ES6 modules, DOM manipulation, reusable classes, form validation, UUID generation, and dynamic UI updates.

EDUCATION

TripleTen — Software Engineering Certificate 2026

University of Illinois at Chicago — B.A. History, Chicago, IL Aug 2008 – Apr 2013
